

10 REASONS WHY WE SHOULD CARE ABOUT OUR ORGANIZATION'S:

ENVIRONMENTAL MANAGEMENT SYSTEM and its conformity to ISO 14001

Our EMS helps...

1. Establish environmental objectives for the organization and holds our team responsible for systematically meeting those objectives.
2. Satisfy our customers by identifying, managing and improving the processes within the system that impact our environment.
3. Coordinate the efforts of teams. Even with the best intentions, individuals with uncoordinated goals often work contrary to one another.
4. Manage sustainability and our product lifecycles from “cradle to cradle”.
5. Design environmentally-friendly attributes into our goods and services.
6. Determine the environmental risk of processes, goods and services in relation to the costs of waste and unsustainable strategies.
7. Proactively manage environmental risk to minimize exposure to financial liability.
8. Continually reduce waste in our goods, services and processes.
9. Promote our company as sustainable and environmentally conscious through self-declaration of conformity to ISO 14001 or 3rd party certification.
10. Reduce the cost of fulfilling environmental obligations.

Learn how to develop or strengthen your EMS in accordance with the international environmental management systems standard, ISO 14001. Our RABQSA-certified five-day EMS Lead Auditor class will teach you how management systems work, the requirements of ISO 14001 and how to effectively audit a management system. It also fulfills the training requirement for becoming certified as an EMS Lead Auditor.

Join our alumni as Director, Manager, Coordinator, Consultant, Engineer, Lecturer, Auditor, Inspector, Lawyer, or Accountant in understanding management systems and how they impact an organization.

Call 800 97 14001 or email us at info@aworldofquality.com to make the necessary arrangements so your company can also enjoy the benefits of an environmentally conscious management system.

We teach you how to use auditing to improve your organization.
